

New Smart Cold Aisle Model

Overview

SmartAisle™ provides always uniform and predictable temperature to all IT equipment controlling directly cold aisle temperature and humidity. The SmartAisle offering optimizes infrastructure deployment and management with an intelligent row-based system that integrates data center racks, power, row cooling, aisle containment, monitoring and control technologies for spaces with up to 40 racks. In recent years, there has been no greater. Freestanding, Rack-independent system with the flexibility to maximize efficiency and capacity from the core to the edge for raised floor and slab data centers. Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks. Eaton's SmartRack Aisle Containment System is an easy-to-assemble structure designed to keep hot and cool air separated for better temperature control and equipment performance in hot aisle/cold aisle configurations.
